### Research Articles

|                                                                                                                                                                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Histopathological and molecular characterization of maize inbred lines against maydis leaf blight</b> – C Manjunatha, Robin Gogoi, SN Rai, RN Gadag, PK Singh, R Aggarwal and Jeevan B                                                                                                | 381 |
| <b>Volatile organic compounds of <i>Bacillus licheniformis</i> and <i>Ochrobactrum tritici</i> as a possible mechanism of action to manage pomegranate fungal fruit rot pathogen <i>Lasioidiplodia pseudotheobromae</i></b> – S Brindhadevi, M Muthamilan, S Rajamanicam and S Nakkeeran | 391 |
| <b>Characterization and management of black leaf spot of papaya caused by <i>Asperisporium caricae</i> (Speg.) Maubl.</b> – B Anjaneya Reddy, V Devappa and R Munilakshmi                                                                                                                | 408 |
| <b>Performance of different wheat genotypes on occurrence of spot blotch disease and yield under varying dates of sowing</b> – R Patsa, S Hembram, PM Bhattacharya, S Bandyopadhyay and S Dutta                                                                                          | 417 |
| <b>Induced mutagenesis mediated by gamma irradiation and ethyl methane sulphonate alters the metabolite profile and ultra-microscopic changes between resistant lines and wild parents against Alternaria leaf blight in jasmine</b> – S Ghosh, M Ganga and S Nakkeeran                  | 428 |
| <b>Molecular characterization of <i>Phellorinia herculeana</i> and optimization of nutrients for culturing <i>in vitro</i></b> – G Sobanbabu, R Reihana, VK Parthiban and V Ramamoorthy                                                                                                  | 444 |
| <b>Morphological diversity in isolates of <i>Colletotrichum chlorophyti</i> causing anthracnose of safed musli (<i>Chlorophytum borivillianum</i> Santapau and Fernandez) in Southern Rajasthan</b> – J P Tetarwal and P Rawal                                                           | 452 |
| <b>Standardization of <i>in vitro</i> cultural conditions and role of nitrogenous fertilizer dose on rice false smut (<i>Ustilaginoidea virens</i>)</b> – R Manasa, P Latha, K Amudha, A Bharanideepan, NM Praveen and A Ramanathan                                                      | 464 |
| <b>Characterization of popular potato varieties in West Bengal for their resistance to early blight</b> – S Jash, G Moinuddin, A Sarkar and R Patsa                                                                                                                                      | 473 |

### Book Review

|                                                            |     |
